

The Processor is the chip which is the brain of the computer. It is also known as the CPU C.

Explanation

Processors have their name because they process data and instructions. The processor is the most important part of a computer.

RAM

RAM is the place in a computer where the operating system, application ~~process~~ programs and data in current use are kept so that they can be quickly reached by the computer's processor. RAM is ~~the~~ much faster to read from and write to than the other kind of storage in the computer.

Hard Disk

A Hard disk is a part of a unit often called a disk drive that stores and provides relatively quick access to large amounts of data on an electromagnetically charged surface or set of surfaces.

A hard disk unit comes with a set rotation speed varying from 4500 to 7200 rpm.
